

# Counterfeit Detection System

One Powerful Device, Three Effective Ways to Catch Counterfeits on the Spot

UV Light

Light Box

Ink Sensor

Nashua Counterfeit Detector System is loaded with three powerful features for easy, fail-safe detection of fraudulent currency bills and documents.

## UV Light

**Spots security stripes on currencies.**

Powerful overhead UV lamp reveals embedded security stripes on US and foreign currencies.

## Light Box

**Detects watermarks on bills and documents.**

It has a built-in light box for checking watermarks on bills and legal documents.

## Magnetic Ink Sensor

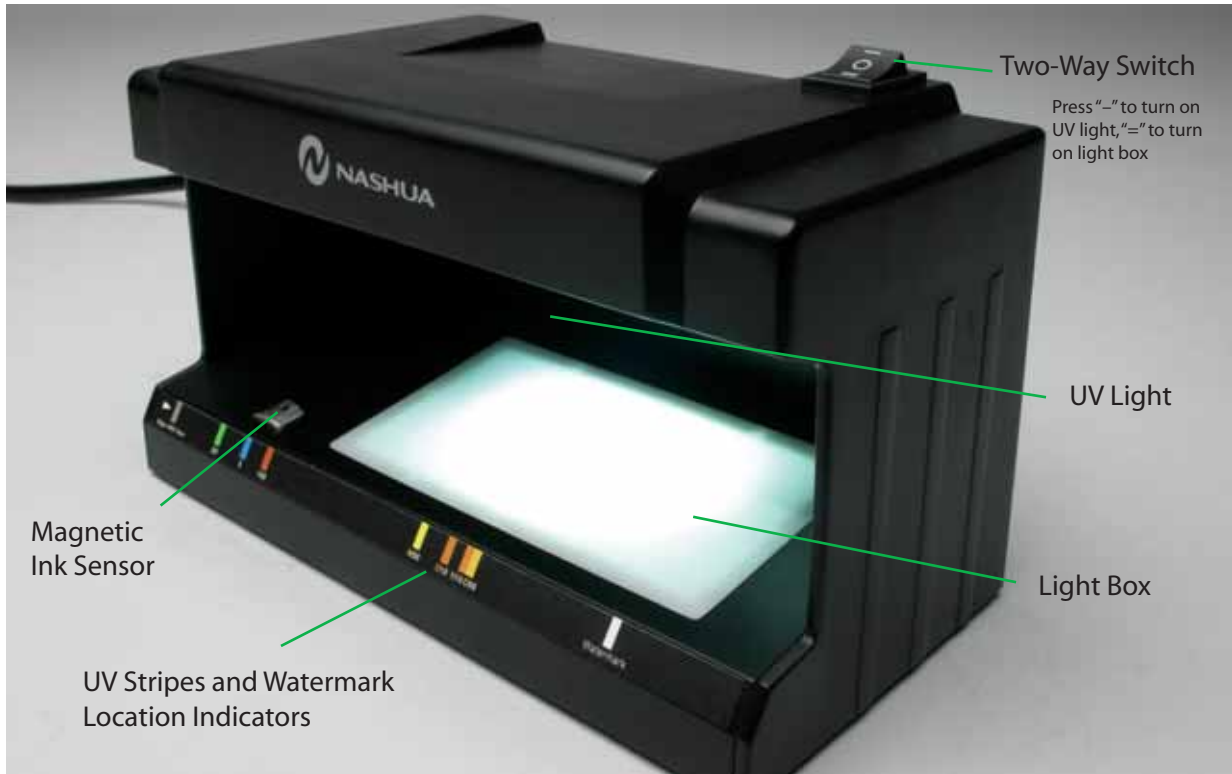

**Triggers sound and light when a real bill is passed over it.**

It has an MICR (magnetic ink character recognition) sensor that "chirps" and lights up the red LED when a real US bill is passed over it. Designed to work on older bills without a security stripe or a watermark.

These combined fraud-detection features make this the most effective loss prevention device in the market today.

# Counterfeit Detection System
