

Increase Your Productivity

Save time, cut costs and improve your products' performance with Nashua ESP+.

ESP+ (Enhanced Scanner Performance)

With new whiter, brighter face sheet for custom EDP labels, Nashua ESP+ can improve your products' appearance. It allows better scanning and fusing by eliminating blocking and enhancing PCR (Print Contrast Ratio). ESP+ also features easy release and anti-curl qualities for trouble-free labeling performance.

Nashua ESP+ Product Line

Nashua offers an comprehensive line of custom EDP label products and features:

Break-Out Splice Labels

Nashua's unique splice process prevents web breaks in boxes. With Break-Out Splice Labels,

you significantly reduce the time you spend running labels requiring only one threading per box.

Kwik Pic and On-Press Pattern Labels

Their unique adhesive design eliminates expensive pattern coat labels, while reducing label application time and operation costs. Kwik Pic and OPP Labels (available in both right and left hand picks) provide improved productivity in freezer applications, less printer failures caused by label jams, and more efficient picking operations.

Step-Saver Perf

Specially designed perforation doesn't need expensive slitters while allowing fast, easy slitting of label stacks by hand. Step-Saver Perf gets rid of re-fanfolding problems, lost labels, double-handling of labels, and expensive production down time.

Premium All-Temp Adhesive

The most in-demand all-weather adhesive on the market, Nashua's Premium All-Temp Adhesive provides excellent stability in extreme transport conditions from hot summer to freezing winter temperatures. Nashua's Premium All-Temp Adhesive is initially repositionable, adheres to all substrates, and is applicable in temperatures from -20° F to 100° F.
