

# Scratch & Secure™ Bond Paper Receipts

## Ink Changes Color When Scratched, Defies Duplication of Receipts

Protect yourself against fraudulent duplication of receipts with Nashua's exclusive Scratch & Secure POS rolls, offering you the highest level of security for bond paper receipts on the market today!

**Security Level 1:** Scratch & Secure receipts can't be copied – our unique Scratch & Secure ink changes color when scratched. To verify a receipt, simply scratch along any Scratch & Secure ink area that hasn't been overprinted... if it's an authentic receipt a second color will show.

**Security Level 2:** Whenever you print your POS rolls, the color combinations can be changed.

**Security Level 3:** The "hidden" color will also appear when a criminal tries to use solvent to change a price, ruining the receipt.

**Security Level 4:** Not available on the open market – sold exclusively to retailers for internal use.

*Bottom color can be changed with chemical pen.*

*Ink changes color when scratched. Enables easy verification of authentic receipt.*

*For back of receipt you can use single color with UV additive for additional level of security.*

*Attempts to remove ink and change prices will result in exposing bottom color of ink.*

*Use Scratch & Secure ink along edges. Print top color in light beige or gray – colors that are almost impossible to reproduce digitally.*

- Unique ink offers visually overt and covert security options for POS rolls
- Most crooks use inkjet printers to produce fake receipts so it is easy to prove a receipt is fake
- Bottom and top colors can be easily changed to foil crooks who steal authentic rolls
- Scratch & Secure ink can be used like regular ink to produce any image that may be needed on a roll
- Unique Scratch & Secure ink can be used for non-security applications, like highlighting information on receipts, tickets, hospitality checks, labels and other thermal paper based media
